

Week 10

SCENARIO

Welcome to the **Java Academy Challenge!**

You have been selected as a trainee programmer. Before becoming a certified Java developer, you must complete the **Programming Quiz Battle**. A series of Java programming questions will appear on the screen. Select the correct answer to prove your knowledge.

Each correct answer defeats the **Code Boss** and earns you points. Choose wisely and complete the challenge to become a Java Champion!

INSTRUCTION

1. Login to your GitHub & select your OOP repository.
2. Create a new directory called "week_10".
3. Move into the week_10 directory & create the following java files:
 - 3.1. **Questions.java**
 - 3.2. **QuizBattleGUI.java**

ACTIVITY

1. Go to your GitHub repository & search for "<> Code"
2. Click the HTTPS tab & copy the url link
3. Open local CMD, change directory to your desired path
4. Enter "git clone repository_url"
5. Enter "code ."
6. Continue/Complete the code given
7. Update the your repository & push back to GitHub using git

Questions.java

```
public class Questions {  
  
    private String question;  
    private String option1;  
    private String option2;  
    private String answer;  
  
    public Questions ( ) {  
  
        // constructor  
  
    }  
  
    public String getQuestion() {  
        return .....;  
    }  
  
    // missing components  
  
    public boolean isCorrect (String choice) {  
        return choice.equals( answer );  
    }  
}
```

```
@Override  
public void actionPerformed(..... e) {  
  
    JButton ..... = (JButton)e.getSource();  
  
    if(question.isCorrect(button.getText())){  
  
        lblResult.setText("Correct! You defeated the Code Boss!");  
  
    }  
    else{  
  
        lblResult.setText("Wrong! Try Again!");  
  
    }  
  
}  
  
// the main entry point to open the app, what is it? {  
  
    new // to run the app;  
  
}  
}
```

QuizBattleGUI.java

```
import javax.swing.*.*;  
import java.awt.event.*;  
  
public class QuizBattleGUI extends JFrame implements ActionListener {  
  
    // to initialize the class, but what class?  
  
    JLabel lblQuestion;  
    JLabel lblResult;  
  
    JButton btn1;  
    JButton btn2;  
  
    public QuizBattleGUI() {  
  
        // name appropriate title  
  
        // set the size, find out the suitable size  
  
        setLayout(null);  
  
        // by default set to close method  
  
        lblQuestion = new JLabel(.....);  
        lblQuestion.setBounds(30,20,320,30);  
  
        ..... = new JButton(.....);  
        .....setBounds(50,80,120,40);  
  
        ..... = new JButton(.....);  
        .....setBounds(200,80,120,40);  
  
        lblResult = new JLabel("Answer the question!");  
        lblResult.setBounds(30,150,300,30);  
  
        add(lblQuestion);  
        add(btn1);  
        add(btn2);  
        add(lblResult);  
    }  
}
```

EXPECTED OUTPUT
