

Week 5

Student Information System

SCENARIO

A university wants to store student information securely.

Each student has:

- Student ID
- Name
- CGPA

Students should NOT be able to change the variables directly.

INSTRUCTION

1. Login to you GitHub & select your OOP repository
2. Create a new directory called "week_5"
3. Move into the week_5 directory & create the following java files:
 - 3.1. **main.Java**
 - 3.2. **sTudent.java**
 - 3.3. **documentation.txt**

ACTIVITY

1. Complete the code template given
2. Answer the following questions via your *documentation.txt*:
 - 2.1. Why are the variables declared as private?
 - 2.2. What happens if the variables are declared public?
 - 2.3. Why do we use getters and setters?
3. Add another variable:
 - 3.1. programme

```
public class Student {
```

```
    _____ studentID;  
    _____ name;  
    _____ cgpa;
```

```
    _____ setStudentID( _____ ) {  
        this.studentID = _____;  
    }
```

```
    public void setName( _____ ) {  
        this.name = _____;  
    }
```

```
    public void setCGPA( _____ ) {  
        this.cgpa = _____;  
    }
```

```
    _____ getStudentID() {  
        return _____;  
    }
```

```
    _____ getName() {  
        return _____;  
    }
```

```
    public _____ getCGPA() {  
        return _____;  
    }  
}
```

EXPECTED OUTPUT

Student ID : CU12345
Name : Ali
CGPA : 3.75
Programme: BIT
